

AMENDMENTS TO THE CLAIMS:

Please amend the claims as follows, substituting any amended claim(s) for the corresponding pending claim(s):

- 5/1/09
1. (Original) A messaging system having integrated therewith a message notification means, said message notification means comprising:
- memory means for storing notification status for messages in said messaging system;
  - a user interface for providing to a user a list of new messages for which a notification has not been cleared;
  - said message notification means permitting the user to select a particular notification from said list for manipulation.
2. (Original) A messaging system according to claim 1 wherein said manipulation consists of selecting a functionality associated with a plurality of options presented to the user.
3. (Original) A messaging system according to claim 2 wherein said plurality of options is presented visually by a plurality of buttons.
4. (Original) A messaging system according to claim 1 wherein said messaging system is a unified messaging system.

5. (Original) A messaging system according to claim 4 further comprising a filtering means for specifying which types of messages are to be included in said list.
6. (Original) A messaging system according to claim 5 wherein said user interface is a graphical user interface and wherein different icons are displayed beside different types of messages in said list.
7. (Original) A messaging system according to claim 1 wherein said manipulation consists of clearing said particular notification.
8. (Original) A messaging system according to claim 1 wherein said manipulation consists of clearing all notifications in said list.
9. (Original) A messaging system according to claim 2 wherein said functionality is selected from the group of: clear item, clear all, call sender, open, open messaging application, and print.
10. (Original) A messaging system according to claim 9 wherein said open messaging application functionality launches a messaging application associated with said messaging system.

11. (Original) A messaging system according to claim 9 wherein said call sender functionality replies to the sender of the selected message notification without retrieving the message itself.

✓ A 12. (Original) A messaging system according to claim 1 wherein said integrated message notification means may be launched from within a messaging application associated with said messaging system.

13. (Original) A messaging system according to claim 1 wherein said integrated message notification means is designated as a particular view within a messaging application associated with said messaging system.

14. (Original) A method of enhancing a messaging system, said method comprising the steps of:

providing a message notification application integrated with a messaging application of said messaging system;

identifying a set of new messages for which a notification has not been cleared;

presenting, to a user by said message notification means, a list of said set of new messages via a user interface; and

permitting said user to select a particular message notification from said list for manipulation.

15. (Original) A message notification means for use with one or more messaging systems, said message notification means comprising:

polling means for polling said one or more messaging systems for new messages;

memory means for storing notification status for messages in said messaging system and

for storing a variable relating to each message;

A (1) a user interface for providing to a user a list of new messages for which a notification has not been cleared;

said message notification means permitting the user to select a particular notification from said list for manipulation.

16. (Original) A message notification means according to claim 15 wherein said variable contains the date, time and sequence of each message.

17. (Original) A method of providing message notifications to a user, said user having access to one or more messaging systems, said method comprising the steps of:

providing a message notification means for use with said one or more messaging systems;

polling said one or more messaging systems, by said message notification means, for new messages;

identifying a set of new messages for which a notification has not been cleared;

presenting, to said user by aid message notification means, a list of said set of new messages via a user interface; and

permitting said user to select a particular message notification from said list for manipulation.

18. (Original) A message notification means for use with one or more messaging systems, said message notification means comprising:

receiving means for receiving indications from said one or more messaging systems regarding the presence of new messages therein;

memory means for storing notification status for each message in said messaging system;

a user interface for providing to a user a list of new messages for which a notification has not been cleared;

said message notification means permitting the user to select a particular notification from said list for manipulation.

19. (Original) A method of providing message notifications to a user, said user having access to one or more messaging systems, said method comprising the steps of:

providing a message notification means for use with said one or more messaging systems;

receiving, at a receiving means within said message notification means, indications from said one or more messaging systems regarding the presence of new messages therein;

identifying a set of new messages for which a notification has not been cleared;

presenting, to said user by said message notification means, a list of said set via a user interface; and

permitting said user to select a particular message notification from said list for manipulation.
